This product can be used both indoors (attics and other places where nests are built) and outdoors on bee, hornet, wasp and yellowjacket nests. It is a violation of Federal law to use this product in a manner inconsistent with its labeling.

GENERAL INSTRUCTIONS FOR USE: Read the **WHOLE** label carefully, **BEFORE** using product. Always hold dispenser upright. Point spray opening away from face, other persons or pets. Aim with caution, with spray opening toward nest, and push button firmly to activate jet stream. Thoroughly wet the nest and any visible insects. Best personal safety and insecticidal results are obtained if the spraying is done during the evening after insects have congregated and are at rest.

The sprayed nests should be rid of these pests within 24 hours after treatment. The spray will leave a residual coating of insecticide that will continue to kill after application. If reinfestation occurs due to migration, removal of insecticide coating by rain or cleaning solution, or if insects return or rebuild nests, repeat the treatment.
